Asian Pacific American Legal Center of Southern California

Principal researcher

The Asian Pacific American Legal Center of Southern California (APALC) was founded in 1983 and is the largest organization in the country focused on providing multilingual, culturally sensitive legal services, education, and civil rights support to Asians and Pacific Islanders (APIs). APALC's mission is to advocate for civil rights, provide legal services and education, and build coalitions to positively influence and impact APIs and to create a more equitable and harmonious society. APALC works on a range of issues affecting APIs and immigrants, including workers rights, consumer rights, immigration, citizenship, domestic violence, hate crimes, health care, language access, and voting rights.

www.apalc.org and demographics.apalc.org

Asian & Pacific Islander American Health Forum

The Asian & Pacific Islander American Health Forum is a national advocacy organization whose mission is to enable Asians and Pacific Islanders to attain the highest possible level of health and well-being. Founded in 1986, APIAHF acts in coalition with local API communities to advocate on health issues of significance to those communities, develop capacity and leadership, and disseminate knowledge. APIAHF envisions a multicultural society where Asian and Pacific Islander communities are included and represented in health, political, social and economic areas, and where there is social justice for all.

Welcome

California is the primary destination of new immigrants and refugees from all corners of the globe: Europe, Africa, Asia, and Latin America. Almost one-third of all new immigrants come to California. They are often joined by an untold number of immigrants and refugees from other states, enriching and diversifying the golden state further.

This means that California has a unique asset in its language diversity. Nearly 40% of Californians speak a language other than English at home: over one quarter or 8.1 million speak Spanish, more than 2.7 million speak an Asian or Pacific Islander language, and Armenian is spoken more than German, French, Russian or Italian.

At the same time, this language diversity presents challenges. Because many immigrants and refugees hail from non-English speaking countries, language barriers impact their ability to access fundamental necessities such as employment, police protection and healthcare.

To highlight and respond to these issues, the Asian Pacific American Legal Center (APALC) and Asian & Pacific Islander American Health Forum (APIAHF) have produced this important report. In it you will find information on the language diversity and English proficiency of Californians by California State Assembly, California State Senate, and United States Congressional District based on Census 2000 data.

Our intended audience for this report includes community-based organizations, coalitions, policy makers and government officials working to understand and address language issues in California. We hope this analysis raises awareness and informs policy making and long-term planning to meet the needs of this population.

We would like to thank The California Endowment and Chung Ying Tang Foundation for their support in producing this report and their vision in addressing the needs of the state's immigrant and refugee communities.

Introduction and Findings

For much of the past century, California has been the primary destination of new immigrants and refugees. Some settle here immediately upon arrival from their native lands; others make their way here after landing elsewhere in the United States. According to the U.S. Department of Homeland Security's Office of Immigration Statistics, California received nearly 30% of all immigrants coming to the United States from 1990 to 2000. These new Californians hail from all corners of the globe: Europe, Africa, Asia, Latin America.

The large number of newcomers who choose California as their home presents unique social, economic and political opportunities to the state. In a world where everything from business to politics to pop culture is globalized, the state's diversity of cultures and languages is a rich but underutilized asset. Nearly 40% of Californians speak a language other than English at home: over one quarter or 8.1 million speak Spanish, more than 2.7 million speak an Asian or Pacific Islander language, and Armenian is spoken more than German, French, Russian or Italian.

At the same time, the diversity of languages in the state presents challenges. For immigrants and refugees, most of whom hail from non-English speaking countries, language barriers are particularly widespread and impact their ability to access fundamental necessities such as employment, healthcare, and police protection. While most new Californians do learn and want to improve their English, the reality is that the English language is very difficult to master and many adult immigrants and refugees are not literate in their native languages. The complexity of the English language also means that basic knowledge of English may not be sufficient for understanding sophisticated transactions, such as dealing with the courts or filling out medical or government forms. In addition, resources to aid new immigrants and refugees in learning English are often limited or non-existent. For example, a 2004 report on California's community colleges noted that statewide, considerable demand and inadequate funding resulted in long waitlists for people to enroll into English-as-a-Second-Language (ESL) classes.[1]

Language barriers have emerged as a major social and economic justice issue facing immigrant and refugee populations in the United States. In order to fully integrate all Californians, legislators in both the state and federal legislative bodies have an obligation to enact public policies that allow limited English speaking residents to access basic services and also to participate in their local community; these policies include providing or improving language assistance (e.g., interpreters, translated materials) as well as increasing opportunities to learn English (e.g., ESL classes).

To assist the state's policymakers in addressing the needs of Californians who speak languages other than English, this report uses Census 2000 data to assess the extent of language diversity and language barriers, providing detailed data by State Assembly, State Senate, and United States Congressional districts. These data include: (1) nativity, or percent of a district's population that is foreign-born; (2) primary language spoken at home; and (3) limited English proficiency. Linguistic isolation is also relevant to understanding language barriers, but is unavailable by legislative district given limitations in the data.[2]

As the following findings show, language is an incredibly important issue to California. This report's key findings include:

- California has a significant population born outside of the U.S., with more than one-quarter or nine million Californians born in another country. For some ethnic communities, the percent born outside the U.S. is dramatically higher, reflecting the role that recent immigration has played in shaping the face of California.

- More than 12 million Californians speak a primary language other than English at home. Although more than 8 million Californians speak Spanish, over 2.7 million speak an Asian or Pacific Islander language, and more than 300,000 speak either Armenian or Persian.

- Many Californians who speak a language other than English at home are fully bilingual in both languages, but a significant number of Californians have difficulty communicating in English. Central American and Southeast Asian communities are among those with the highest rates of limited English proficiency and linguistic isolation.

Technical note: Percent figures listed under primary language and population should be read as percent of column, or total population. Percent figures listed under limited English proficient and foreign-born should be read as percent of row, or racial group/racial subgroup.

[2] A detailed description of the methodology used to produce these data can be found on page 190.

Findings
Californians Born Outside the U.S.

According to Census 2000, nearly nine million Californians are foreign-born. Statewide, over one in four are born abroad, the overwhelming majority in countries where English is not the primary language, such as Mexico, China, Vietnam, and Korea.

Racial and ethnic groups vary considerably in their likelihood of being foreign-born. In California, 62% of Asians and 44% of Latinos are foreign-born, compared to 8% of whites and 6% of African Americans (see Table FB-1). Taiwanese are most likely among the state's ethnic groups to be born abroad, followed closely by several Central American (Hondurans, Guatemalans, Salvadorans) and Southeast Asian (Vietnamese, Thai) groups. Iranians, Asian Indians, Koreans, and Chinese are also among the top ten ethnic groups most likely to be born outside of the United States (see Table FB-2).

Findings
Primary Language Spoken at Home

Many native and foreign-born Californians speak a primary language other than English at home. Statewide, more than 12 million Californians speak languages in each of 39 language categories reported by the U.S. Census Bureau, contributing to the state's unparalleled linguistic diversity.

Not surprisingly, given California's proximity to Latin America and the already large Mexican, Salvadoran, Guatemalan, and other Latino populations present in the state, Spanish is far and away the most prevalent language spoken at home, after English. However, among the top ten languages spoken in California, more than half are Asian languages: Chinese, Tagalog, Vietnamese, Korean, and Japanese. Other commonly spoken languages include Armenian and Persian (see Table LANG-1).

Looking at legislative districts, over one in four legislative districts in California have constituencies where a majority of people speaks a language other than English at home—this includes 23 state Assembly, 12 state Senate, and 14 Congressional districts.

TABLE LANG - 1: PRIMARY LANGUAGE, CALIFORNIA*

Findings
Limited English Proficiency and Linguistic Isolation

While many Californians who speak a language other than English at home are fully bilingual, others are not. In California, well over six million—or one in five—Californians experience some difficulty speaking English. A considerable majority of the state's limited English proficient persons are Latino and Asian, with roughly 40% of Latinos and Asians overall and half of certain Latino and Asian ethnic groups being LEP. *Majority* LEP ethnic groups include Central Americans (Guatemalans, Hondurans, Salvadorans) and Southeast Asians (Vietnamese, Hmong, Cambodians, Lao, Thai), as well as Taiwanese and Koreans. Chinese, Mexicans, Armenians, Iranians and Tongans also have rates of limited English proficiency significantly above the state average (see Tables LEP-1 and LEP-2).

Findings
Limited English Proficiency and Linguistic Isolation

Although there are significant LEP constituencies throughout the state, Southern California is home to two state Assembly (AD46 and AD69), one state Senate (SD22), and one Congressional (CD31) district that are *majority* limited English proficient (see Tables LEP-3, LEP-4 and LEP-5).

Findings
Limited English Proficiency and Linguistic Isolation

Another strong predictor of the need for language assistance is the rate of "linguistic isolation," defined as the percentage of households in which no member 14 years or older speaks English "very well." Such households lack an adult who can communicate with the outside world, and many of these households must rely on children to navigate complex and difficult issues such as a family member's legal matters or medical diagnosis and care.

In the state, one quarter of Asian and Latino households are linguistically isolated, compared to ten percent of all households in the state (see Table LI-1). Again, Southeast Asian (Vietnamese, Hmong, Thai) and Central American (Guatemalan, Honduran, Salvadoran) households are disproportionately isolated, with Taiwanese, Korean, and Chinese households also affected at high rates. Because of limitations in the data, rates of linguistic isolation could not be provided by racial or ethnic group in specific legislative districts. The data is included at the state-level .

Policy Recommendations

California's language diversity is an untapped resource for a state that serves as a gateway to international business, especially for Latin America and the Pacific Rim. At the same time, language barriers affect many Californians on a daily basis—at every point where an immigrant or refugee must interact with a government agency, a business, or other institution, language may present a significant barrier to effective communication and participation. For example, language may be a barrier in *education* (e.g., a parent seeking information on her child's education), *employment* (e.g., a worker trying to file a claim for unpaid wages), *health care* (e.g., a patient trying to understand his treatment and medications), *social services* (e.g., a domestic violence victim trying to qualify for temporary shelter), *courts* (e.g., a tenant fighting an eviction), and *sales and marketing* (e.g., a consumer trying to understand the terms of her auto lease). Language may also be a barrier in less common—but possibly urgent—situations, such as in *disaster relief* (e.g., a family trying to obtain emergency shelter after an earthquake).

As the voice of all Californians, policymakers and elected officials have a responsibility to ensure that our state's language resources are maximized and that language is not an insurmountable barrier for new immigrants and refugees. The following recommendations are intended to be general guidance—policymakers and elected officials should carefully consult with community leaders, advocates, and others that work with immigrant and refugee populations to identify specific policy solutions.

1. COLLECT, DISAGGREGATE AND USE DATA

Government agencies—such as the U.S. Census Bureau and the California State Data Center—collect demographic data; many other entities such as school districts also collect data. Demographic data, including data on primary language, English proficiency, linguistic isolation, and other factors relevant to language proficiency (such as race and ethnicity), are critical to understanding the state's language diversity and challenges.

Specific and relevant demographic data must be collected, such as primary language spoken and level of English language proficiency.

Data must consistently be broken down beyond broad racial categories, so that overall numbers (e.g., for all Asians) do not mask the true needs of specific sub-populations (e.g., Cambodians).[3]

As data collection tools evolve or change, these new tools must adequately capture and disaggregate data. For example, the Census Bureau is moving towards a lengthier annual survey of less people instead of the current decennial census that attempts to count all Americans; translations or other assistance must be provided to ensure that limited English proficient families and households will be able to accurately complete the new forms.

Government agencies and other institutions that capture specific and disaggregated demographic data must analyze and effectively utilize this data to ensure that language diversity and barriers are fully understood and addressed.

2. IMPLEMENT, ENFORCE AND STRENGTHEN EXISTING LAWS AND POLICIES

Currently, existing federal and state laws and policies protect the rights of limited English speaking persons in many contexts. The key federal law, Title VI of the Civil Rights Act of 1964, prohibits any entity that receives federal funding from discriminating against limited English speaking persons. In California, the Dymally-Alatorre Bilingual Services Act of 1973 requires state agencies to provide bilingual staff and distribute translated written materials in certain non-English languages. At both the federal and state level, numerous other laws and policies require language assistance in particular instances. For example, California has more than 60 statutory provisions requiring language assistance in the health care context alone.[4] However, none of these laws is fully implemented or enforced, and as a result, millions of Californians are unable to benefit from the civil rights and due process protections offered by these statutes.

Existing laws and policies must be fully implemented and funded. This includes at minimum sufficient funds and resources to:

- Assess which communities are impacted;
- Outreach to impacted communities about their rights;
- Educate individuals on how to enforce their rights;
- Train bilingual persons to serve as interpreters and translators;
- Train agency or organization staff on the rights of LEP individuals; and
- Translate documents and provide interpreters for limited English proficient persons.

[3] *See, e.g.*: Asian Pacific American Legal Center. 2005. *The Diverse Face of Asians and Pacific Islanders in California*. Los Angeles, CA: APALC.
[4] Perkins, Jane, Mara Youdelman, and Doreena Wong. 2003. *Ensuring Linguistic Access in Health Care Settings: Legal Rights and Responsibilities.* Los Angeles, CA: National Health Law Program.

Existing laws and policies must be effectively enforced, which requires sufficient funding for not only consumer or client education, but also the infrastructure to receive complaints and investigate possible violations of the law, as well as the authority to render enforceable decisions if violations are found.

Laws that ensure that limited English proficient persons have equal access to publicly-funded programs must be strengthened. For example, the state of California has a number of "model laws" that require language accessibility. However, many of these statutes, like the Dymally-Alatorre Act, lack an enforcement body charged with investigating and resolving complaints.

Laws must also be expanded or clarified to ensure that all Californians are able to equally participate in and access basic services and systems regardless of language ability. For example, an estimated seven million Californians may be denied equal access to the state's judicial system because of language barriers, yet California law does not clearly require or provide for language assistance in the administration of justice.[5]

3. EXPAND OPPORTUNITIES TO LEARN ENGLISH

Many limited English speakers do speak some English, and most want to learn or improve their English language skills. Although English is a difficult language to learn, immigrants and refugees understand that speaking, reading and writing English is critical to participating in American society, gaining an education, and securing jobs with better wages and opportunities for promotion and advancement.

Programs that teach English-as-a-Second Language (ESL), including programs for English learner students and limited English proficient workers, must be better funded, improved, and expanded. Despite significant demand for English language instruction, such as ESL classes at local community colleges, community centers, or adult schools, such programs are usually underfunded, oversubscribed, and have long waiting lists.[6] Programs for K-12 students in the process of learning English also need more resources (e.g., more trained teachers, better teacher training programs, better student assessment tools).[7] There are also insufficient vocational ESL (VESL) programs, which aid immigrant and refugee workers in learning English relevant to their jobs.

Workforce development and other employment programs that link employment services and training to English-language acquisition must be greatly expanded. Because English language skills are directly related to the ability to earn a decent wage or find a job with a career ladder, employment programs—including welfare-to-work programs—need to clearly assess a worker's English and non-English proficiency as well as offer VESL programs in addition to basic job skills training and job search activities.

English-language acquisition programs should address barriers that may prevent most immigrants and refugees from participating. Because many immigrants and refugees work jobs or shifts that do not allow them to easily participate in existing programs such as weekend classes, English-language classes need to be offered in non-traditional settings (e.g., at work locations or through a child's school) and address related barriers to participation (e.g., access to transportation or affordable child care).

Methodology

Conducted by the United States Census Bureau, Census 2000 provides information on population and population characteristics, including language, English language ability, and related characteristics, by racial group and racial subgroup (i.e. ethnic group) for a host of geographic areas. Unfortunately, Census 2000 does not simultaneously provide such characteristics by racial subgroup for legislative districts.

This study attempts to address this shortcoming by estimating language, limited English proficiency, nativity, and citizenship in California Congressional, State Senate, and State Assembly Districts for each of four racial groups and 13 racial subgroups: African Americans, Asians (including Asian Indian, Cambodian, Chinese non-Taiwanese, Filipino, Hmong, Japanese, Korean, and Vietnamese subgroups), Latinos (including Guatemalan, Mexican, and Salvadoran subgroups), and non-Hispanic Whites (including Armenian and Iranian subgroups).

The process of estimating these legislative district level data occurred in two stages. First, census tract level estimates of language, limited English proficiency, nativity, and citizenship were produced for each racial group and racial subgroup. Second, census tract level data were disaggregated to the census block level and re-aggregated to the legislative district level to produce final estimates.

Census Tract Level Estimation

The challenge in producing legislative district level estimates lies in the availability of Census 2000 data on language, limited English proficiency, and related characteristics at the census block level, the geography used to construct legislative districts. The Census Bureau does not provide data on 'long-form' population characteristics at the census block level and suppresses a considerable amount of these data at larger geographic areas, including the census tract and county levels, according to data suppression thresholds designed to protect the anonymity and confidentiality of response. Data suppression thresholds make the acquisition of data on smaller racial groups and racial subgroups at smaller geographies particularly difficult.

To address this problem, it became necessary to estimate missing census tract level data using statistical models. Logistic regression models predicting these missing data were developed for each racial group and racial subgroup using available census tract level data on core characteristics (including limited English proficiency, nativity, and citizenship) and other demographic characteristics (including linguistic isolation, median age, average household size, high school completion, per capita income, poverty, and homeownership) for the total population as predictors. Model outcomes were used with available data to estimate missing racial group and racial subgroup population characteristics. Census tract level data were then aggregated to the county level to compare with data available at the larger geographic area. In cases where aggregated and actual county level data were inconsistent, census tract level estimates were adjusted for consistency.

Disaggregation, Re-Aggregation of Census Tract Level Estimates

Because legislative districts are constructed using census blocks, actual and estimated data at the census tract level were disaggregated to the census block level using available data on the proportion of total population or relevant racial group population within census tracts residing in corresponding census blocks. Census block level data were then aggregated to the legislative district level using publicly available 'block assignment' files, creating estimates for each Congressional, California State Senate, and California State Assembly District. Legislative district level estimates were suppressed if (a) they were produced using census tract level estimates that could not be adjusted using county level data, (b) the amount of adjustment necessary to achieve accuracy was excessive, or (c) they captured population characteristic data for a racial group or racial subgroup numbering fewer than 100.
