Conclusions

• Mexico’s increased enforcement appears to be changing long-time patterns in the apprehensions and deportations of Central American migrants.

• Up until 2014, apprehensions in the United States grew at a much faster pace than apprehensions in Mexico. This pattern likely will reverse in 2015, as Mexico’s apprehensions are projected to increase by about 70 percent and U.S. apprehensions will drop considerably.

• Mexico deported the vast majority of unaccompanied children arriving back in Central America, six times as many as the United States in 2014.

• Most adults deported to the Northern Triangle are young males with low educational attainment levels and experience in low- or unskilled jobs.

• Most minors deported are males between the ages of 12 and 17; however, the share of young children and girls increased substantially after 2013, along with a growth in family migration.

• Most deportees do not have a criminal background.
Questions and Answers

• Slides and audio from today’s webinar will be available at www.migrationpolicy.org/events

• The report, *Migrants Deported from the United States and Mexico to the Northern Triangle: A Statistical and Socioeconomic Profile*, is available at: http://bit.ly/1LJdtn5
